

Our quotations incorporating installation and site work are limited to include the following except otherwise clearly stated otherwise:

FREIGHT OR DELIVERY

Your play equipment will be delivered to site. It will come safety wrapped, protecting your asset until the playground installation is completed.

MARKOUT

Our installation team will start by marking out the site to the plan to confirm the playground positioning.

HOLE DRILLING

The holes required for posts and activities will then be augured and prepared for concrete.
*Quotes exclude hard digging.

PRE ASSEMBLY

Once the site is prepared and holes augured the installation team will begin constructing your new playground, paving stones are provided and placed at the base of all holes to create a supportive barrier between the posts, concrete and ground. These help stabilise the whole playground and set a level benchmark to work from. From here on you will see your new playground quickly grow from the ground up.

CONCRETE

Structural concrete will be mixed or delivered and poured into all holes, setting your playground in stone. This is one of the final stages in the construction process and is vital in ensuring your playground will stand the test of time.

FINAL ASSEMBLY

All bolt caps will be installed, equipment will be unwrapped and cleaned down.

COMPLETION

On completion, our representative will walk over the project with you, to check and ensure completion of the project scope and quality standard. An aftercare document will be emailed to you.
